

Project Initialization and Planning Phase

Date	13 July 2026
Team ID	xxxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Banks receive a large number of credit card applications every day. Manually evaluating each application based on financial and demographic information is time-consuming and may lead to inconsistent decisions. The Credit Card Approval Prediction system uses Machine Learning to analyze applicant details such as income, employment status, education, family information, and housing type to predict whether a credit card application is likely to be approved or rejected. This helps banks make faster, more consistent, and data-driven decisions while reducing manual effort.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card	Get my credit card approved quickly	I don't know whether I meet the bank's eligibility criteria	The approval process depends on many financial and personal factors	Worried about rejection and delays
