

Performance Testing

Date	13 July 2026
Team ID	xxxxxx
Project Name	Credit Card Approval Prediction
Maximum Marks	5 Marks

Performance Testing

Step 1: Testing Overview

Field	Details
Testing Tool Used	Browser (Google Chrome) & Flask Local Server
Type of Testing	Functional Performance Testing
Target Module / API	Credit Card Prediction Module (/predict)
Test Environment	Local System (Windows 11, Flask)
Test Date	13 July 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	Submit valid applicant details	1	5	Prediction displayed successfully
2	Submit different applicant det	1	5	Correct prediction generated
3	Refresh and test multiple times	1	20	Application remains responsive
4	Invalid input testing1	1	5	Input handled without crashing

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	0.8 sec	Pass	Fast response
2	Response Time (Max)	< 5 seconds	1.6 sec	Pass	Within limit
3	Throughput (Req/sec)	-	2 Req/sec	Pass	Stable
4	Error Rate	< 1%	0%	Pass	No errors
5	CPU Utilization	< 80%	32%	Pass	Normal usage
6	Memory Utilization	< 80%	40%	Pass	Stable

Step 4: Observations & Analysis

The application responded quickly for all test cases. Prediction results were generated successfully without any errors. CPU and memory usage remained within acceptable limits, and the Flask application performed efficiently during repeated testing.
